Amendments to the Claims

- 1. (Currently Amended) A continuous method of cutting a plurality of moist substrates comprising:
- a) placing a <u>wound</u> log of moist substrate on a conveyor, the log having a length, a width and a moisture content of at least about 50%;
 - b) advancing the conveyor;
 - c) discharging the log from the conveyor onto a transfer plate;
 - d) placing the log into a pocket on a cutting support;
- e) advancing the pocket containing the log toward a plurality of cutting blades:
- f) advancing the pocket containing the log through the cutting blades, whereby the log is cut into a number of shorter rolls;
 - g) advanting the pocket containing the rolls away from the cutting blades;
 - h) discharging the rolls from the pocket; and, repeating steps a) through h) in a continuous manner.
 - 2. (Original) The method of claim 1, wherein the log is at least 2540 mm long.
- 3. (Original) The method of claim 1, wherein the log has a diameter of from about 50 mm to about 140 mm.
- 4. (Original) The method of claim 1, wherein at least 95% of the log is cut into useable rolls.
 - 5. (Original) A method of cutting a coreless wet wipes log comprising:
- a) placing a coreless wet wipes log in a pocket, the log having a length of at least 2540 mm, a diameter of from about 50 mm to about 140 mm and a moisture content of at least 50%;
 - b) advancing the pocket containing the log toward a cutting position;
 - c) cutting the log into a plurality of rolls in the cutting position;

- d) the pocket maintaining the shape, integrity and position of the log as it is cut into rolls without the need for clamps and with out the need for a mandrel; and,
 - e) discharging the rolls from the pocket.
- 6. (Original) The method of claim 5, wherein steps a) through e) are repeated in a continuous process resulting in the production of at least 300 rolls per minute.
- 7. (Original) The method of claim 5, wherein a conveyor is used to place the logs in the pockets.
- 8. (Original) The method of claim 5, wherein the rolls are discharged into a diverter.
- 9. (Original) The method of claim 5, wherein at least 95% of the log is cut into useable rolls.
 - 10. (Original) A method of making a plurality of wet wipes rolls comprising:
- a) placing a wet wipes log on a conveyor, the log having a length, a width and a moisture content of at least about 65%;
 - b) advancing the conveyor;
 - c) discharging the log from the conveyor into a holding support;
- d) advancing the support containing the log toward a plurality of cutting blades;
- e) engaging the log and the cutting blades, whereby the log is sectioned into a plurality of rolls; and,

repeating steps a) through e) so that at least 300 rolls are produced per minute.

- 11. (Original) The method of claim 10, wherein the log is at least 2540 mm long.
- 12. (Original) The method of claim 10, wherein the log has a diameter of from about 50 mm to about 250 mm.
- 13. (Original) The method of claim 10, wherein at least 95% of the log is cut into useable rolls.

- 14. (Original) A continuous method of cutting a plurality of wet wipes logs comprising:
- a) placing a coreless wet wipes log on a conveyor, the log having a length, a width and a moisture content of at least about 50%;
 - b) advancing the conveyor;
 - c) discharging the log from the conveyor onto a transfer plate;
- d) metering the rate at which the log is discharged from the transfer plate to a pocket;
- e) advancing the pocket containing the log toward a plurality of cutting blades;
- f) engaging the log in the pocket with the cutting blades, whereby the log is cut into a number of shorter rolls;
 - g) discharging the rolls from the pocket;
- h) repeating steps a) through g) in a continuous manner; and, periodically interrupting the repetition of steps a) through g) to move the cutting blades to a position away from pocket; and,

honing the cutting blades while in the away position, whereby material from the honing does not contaminate the pocket, the log, or the rolls.

- 15. (Original) The method of claim 14, wherein the log is at least 2540 mm long.
- 16. (Original) The method of claim 14, wherein the log has a diameter of from about 50 mm to about 140 mm.
- 17. (Original) The method of claim 14, wherein at least 95% of the log is cut into useable rolls.
 - 31. (Original) A method of cutting a plurality of flexible substrates comprising:

 a) placing a flexible log on a conveyor, the log having a length and a

width;

- b) advancing the conveyor;
- c) discharging the log from the conveyor into a holding support;

- d) advancing the support containing the log toward a plurality of cutting blades;
- e) engaging the log and the cutting blades, whereby the log is sectioned into a plurality of rolls; and,

repeating steps a) through e) so that at least 300 rolls are produced per minute.

- 32. (Original) The method of claim 31, wherein the log is at least 2540 mm long.
- 33. (Original) The method of claim 31, wherein the log has a diameter of from about 50 mm to about 250 mm.
- 34. (Original) The method of claim 31, wherein at least 95% of the log is cut into useable rolls.
- 35. (Original) A continuous method of cutting a plurality of flexible logs comprising:
- a) placing a flexible log on a conveyor, the log having a length and a width;
 - b) advancing the conveyor;
 - c) discharging the log from the conveyor onto a transfer plate;
- d) metering the rate at which the log is discharged from the transfer plate to a pocket;
- e) advancing the pocket containing the log toward a plurality of cutting blades;
- f) engaging the log in the pocket with the cutting blades, whereby the log is cut into a number of shorter rolls;
 - g) discharging the rolls from the pocket;
 - h) repeating steps a) through g) in a continuous manner; and,

periodically interrupting the repetition of steps a) through g) to move the cutting blades to a position away from pocket; and,

honing the cutting blades while in the away position, whereby material from the honing does not contaminate the pocket, the log, or the rolls.

- 36. (Original) The method of claim 35, wherein the log is at least 2540 mm long.
- 37. (Original) The method of claim 35, wherein the log has a diameter of from about 50 mm to about 140 mm.
- 38. (Original) The method of claim 35, wherein at least 95% of the log is cut into useable rolls.
- 39. (Original) A continuous method of cutting a plurality of substrates comprising:
- a) placing a log of substrate on a conveyor, the log having a length and a width;
 - b) advancing the conveyor;
 - c) discharging the log from the conveyor onto a transfer plate;
 - d) placing the log into a pocket on a cutting support;
- e) rotating the pocket containing the log toward a plurality of circular cutting blades;
- f) rotating the pocket containing the log through the circular cutting blades, whereby the log is cut into a number of shorter rolls;
 - g) rotating the pocket containing the rolls away from the cutting blades;
 - h) discharging the rolls from the pocket; and, repeating steps a) through h) in a continuous manner.
